

REINVENTING CRYOSURGERY

WORK WITH THE BEST

The CryoPen is the new innovation in cryosurgery. Adding this device to your clinic, will differentiate your practice by allowing you to have quick, stress free and effective treatments. Since anesthesia is not necessary, your surgical risk for older pets is decreased. You will also have the flexibility of performing on demand procedures in a matter of seconds with no pre or post-op care.

Cryo**Pen**[®]

THE INSTRUMENTS

CryoPen|b - 3 applicators: Gold Ø 1-4mm, Silver Ø 2-8mm, Bronze Ø 4-12mm. **To be used with 23.5g cartridges.**

CryoPen|o - 3 applicators: Blue Ø 1-3mm, White Ø 2-6mm, Green Ø 4-8mm. **To be used with 8g & 16g cartridges.**

CryoPen|x+ - 4 standard applicators: Blue Ø 1-3mm, White Ø 2-6mm, Green Ø 4-8mm, Yellow Ø 7-20mm.
2 longer 60mm applicators: Blue Ø 1-3mm, White Ø 2-6mm. **To be used with 8g & 16g cartridges.**

Cartridges 8g	100 seconds of constant gas flow
Cartridges 16g	200 seconds of constant gas flow
Cartridges 23.5g	300 seconds of constant gas flow

WHAT TO TREAT

Smaller lesions on the face, nose, eyelids, ears, legs and feet are often considered not important enough for surgery under general or local anesthetic.

CryoPen offers an innovative solution in these cases.

CryoPen®

Pets can be in and out in just minutes and they emerge bright and bouncy, rather than having to be monitored for two to three hours.

There's no cutting or bleeding. Therefore, nothing for your patient to lick or pull on. Minimizing risk of infection.

Tumor of the eyelid

Treatment time: 5-15 seconds

Common wart

Treatment time: 15 seconds

Tumor of the eyelid

Treatment time: 10-20 seconds

Skin tumor

Treatment time: 15-30 seconds

HOW TO TREAT

The freezing of the tissue is quick. Treatments only take seconds, with no anesthesia or pre or post-op care required. The CryoPen works with very practical disposable cartridges and emits a fine jet of nitrous oxide under high pressure.

Thanks to the extreme precision there will be no collateral damage to healthy tissue. Load the device, check out the selection of applicators allowing for the treatment from a pinpoint 1mm up to a width of 20mm, point and freeze...

Cryosurgery, of course, is nothing new. It is recognized as THE reference in the dermatology clinic. However, veterinarians who have struggled with cryoliquid spills, imprecise cotton buds and laborious deliveries of hazardous liquid nitrogen will experience a different technology by using the CryoPen.

SOME EXAMPLES

Most common pathologies to treat are: skin tumors, eyelid tumors, warts, papilloma, cysts, perianal and sebaceous adenoma and more..
